

DVS | DIGITAL VERIFICATION SOLUTION

Your Business Central Extension for fast
processing of process-related questions directly in NAV

WORKING IN A RESOURCE-CONSERVING MANNER - WITH MORE TIME AND LESS PAPER

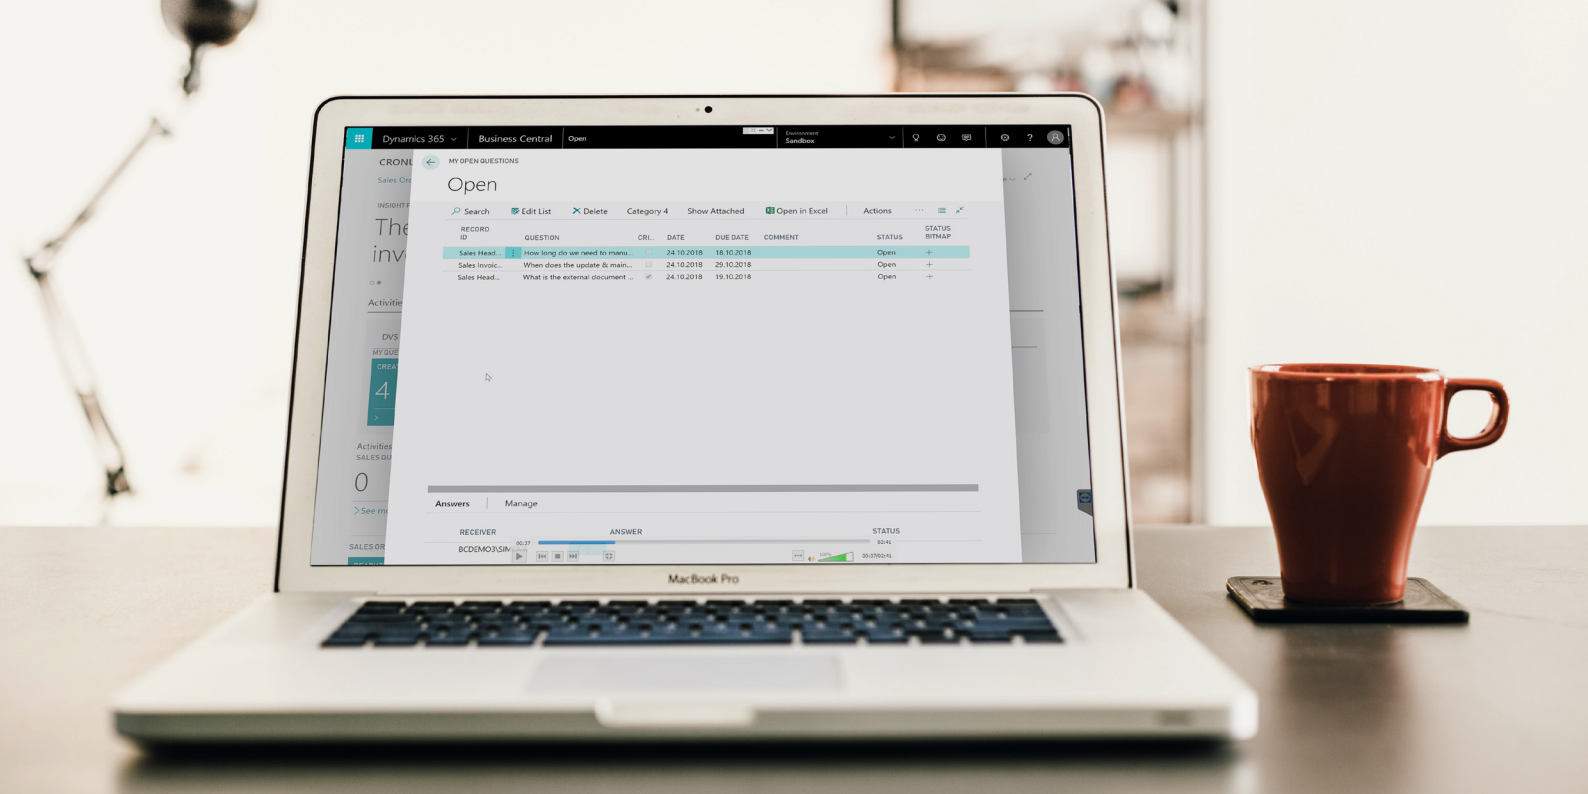

Digitization has long since found its way into many business areas. But even today, it is the routing slips with process-related, sometimes critical questions that are often circulated in paper form. The result: long waiting times, interrupted work processes and lost time.

Simova GmbH has now developed the right add-on module for its Microsoft Dynamics NAV industry solution to eliminate these problems:
DVS. the Digital Verification Solution.

Germany consumes as much paper as the continents of Africa and South America put together.

Paper consumption is rising despite digitalization.

ADVANTAGES FOR MANAGEMENT

Digitization - the buzzword of recent years has long since found its way into most companies and their structures and has led to changed and optimized work processes. However, even today, process-related, often critical questions are still often put on paper slips and circulated. Loss of time due to long waiting times and in case of doubt interrupted work processes are the result.

DVS puts an end to these interruptions. The NAV Add-On makes it possible to ask questions directly from the System and targeted to selected employees. If necessary, critical work processes can be stopped until the answer is accepted. Substitution rules in case of absence are easy to set up.

- Cost/time saving
- Increase in productivity
- Another step into the paperless office
- Safeguarding of work processes

SYSTEM REQUIREMENTS

DVS can be seamlessly integrated into all Microsoft Dynamics NAV versions from 2013 and is compatible with all industry and individual solutions based on Dynamics NAV.

ADVANTAGES FOR EMPLOYEES

A well-functioning internal communication contributes significantly to the success of a company. To send critical, process-related questions in paper form to colleagues is counterproductive. In case of doubt, you have to wait a long time for answers, work processes are stopped, important time is lost.

- Rapid exchange of information
- Fast reaction and information capability
- Location- and time-independent information
- Archiving of completed routing slips

DVS enables you to send your questions directly from the Microsoft Dynamics NAV application to selected colleagues or groups. A substitute rule is quickly set up for absences. The questions arrive in real time via the role center and can be processed quickly and easily.

The answering employee sets the status of the question to „answered“ and the creator can accept the answer - all in the shortest possible time!

All processes are stored in the system and can be retrieved at any time.

ADVANTAGES FOR THE IT DEPARTMENT

DVS transfers questions that were previously processed outside the IT landscape and often unlogged into your Microsoft Dynamics NAV environment. This makes work processes more transparent and always traceable, even in the event of unexpected staff failures.

DVS can be integrated into your system with just a few clicks and set up quickly.

DVS allows the creation of individual recipients or entire recipient groups as well as the convenient setup of substitute rules. All processes are automatically saved and remain retrievable.

- Compact Add-On for Microsoft Dynamics NAV Systems
- Mail server must be reachable for Microsoft Dynamics NAV
