

EDS – Eletronic Delivery Solution

Electronic dispatch of business documents from your
Microsoft Dynamics NAV-based business software

„EDS actively supports you in reducing costs. By shipping in real-time, you also save time for other important tasks.“

Christian Haase, CEO
Simova GmbH

ELECTRONIC DISPATCH OF YOUR BUSINESS DOCUMENTS - FAST AND SECURE

Every day, your company sends quantities of invoices and other business documents by regular mail. Despite the advent of digitization in many business areas, the dispatch of documents is still stuck in old structures. On the way to the digital future, business documents should also be digitally sent and saved in order to reduce the high costs for postage and material - with EDS, the Simova add-on for Microsoft Dynamics NAV based ERP systems.

EDS stands for "Electronic Delivery Solution", the electronic dispatch of business documents. The module is integrated into your existing NAV sector software and allows you to send invoices, payment reminders, order confirmations or credit notes electronically by e-mail. You define dynamically which recipient is to receive which documents. For example, you can set up the system in a way that invoices are automatically being sent to a business partner in the background by batch

processing after they have been issued. In the meantime, another business partner is receiving his order confirmations in addition to a personal message or another document. EDS adapts to your needs in a very flexible way.

If you also use the document management system DMS developed by Simova, you will have the option of sending documents from your electronic archive as attachments. The EDS and DMS add-ons interact with each other for even more convenience and efficiency in day-to-day work.

SYSTEM REQUIREMENTS

The Simova EDS add-on module can be seamlessly integrated into all Microsoft Dynamics NAV-based ERP systems from version 2013 onwards. An e-mail server via which the shipment takes place is required. E-mails can be viewed in advance in an e-mail program such as Outlook.

NEW since autumn 2017:

Our EDS add-on for the electronic dispatch of business documents has been PEPPOL compliant since autumn 2017 and thus complies with the European standard for the dispatch of e-bills. In addition, our solution will also be enhanced with the ZUGFeRD data model so that users in your NAV solution have access to all options for sending invoices.

ADVANTAGES FOR THE EXECUTIVE OFFICE

As CEO, the profitability of the company is your top priority. You optimize workflows and business processes with the aim of remaining competitive in the future.

The topic of digitization has already found its way into your company in some form or other. But usually business documents are still sent by traditional mail. In addition to the amount of work this means high costs for postage and material.

Expenditure and workload can conveniently be reduced by using the EDS module. By integrating it into your existing Dynamics NAV system time expenditure is significantly reduced and costs are minimized. And this without having to forego personal contact with your customers.

EDS enables you to send business relevant documents electronically. With a uniform layout of the e-mails sent you will increase the professional appearance of your company.

You can flexibly choose between automated sending in the background or sending individual personalized e-mails using Microsoft Outlook. You can also define which documents are being sent together. For example, you can specify that an offer is always accompanied by the valid terms and conditions.

Your highlights

- Significant cost savings due to elimination of postage and materials
- Accelerated order processing by automating work steps
- Fast return on investment thanks to short implementation time
- No loss of personal customer contact thanks to personalized e-mails
- Uniform layout and professional appearance

ADVANTAGES FOR THE EMPLOYEES

Your day-to-day work includes providing and sending business documents such as invoices, order confirmations or payment reminders. Especially the daily tasks are often time-consuming and keep you from major tasks. Unlike many other business processes the sending of business documents has often not been digitized yet. It is high time to change that.

Simova's Add-On Electronic Delivery Solution (EDS) is a compact module for Dynamics NAV systems that enables electronic sending of business documents. Your customers receive relevant documents as PDF files by e-mail.

You can dynamically define whether the dispatch takes place automatically, via a multi user queue or in a personalized email. Design templates create a familiar interface. Define the dispatch according to the recipient so that your contact person only receives the documents relevant to him/her.

If you additionally have the Simova document management system in use, you can attach attachments directly from your archive system to your e-mail.

Your highlights:

- Fast dispatch of business-relevant documents
- Individual adjustment of recipient information - your contact person receives the data he needs
- Increased transparency through possible integration into the document management system (DMS)

ADVANTAGES FOR CUSTOMERS

A company's relationship with its customers is one of the most important pillars of its success. Whoever responds individually to the specific requirements of each customer will noticeably increase satisfaction and competitiveness thus laying an important foundation for success.

With the EDS module of Simova, you can quickly and efficiently provide your customers with exactly the documents they need for their work area. With EDS, business documents are sent electronically. At the same time, you remain completely flexible in the visual and content design of e-mails to your customers. Take, for example, the design templates of your business partners and create a familiar interface.

The focus on customer benefit in the individual selection of the sent documents creates trust and makes the customer's work easier. This creates customer loyalty, which both sides benefit from.

Your highlights

- Fast processing of customer requests
- Any extension of documents to be provided
- increased transparency through integration into the document management system
- Individual design

Think outside the box.
